ABOUT

Former Corporate Tax Consultant at KPMG with experience analyzing complex financial datasets and supporting cross-border compliance projects for multinational clients. Currently pursuing Master of Science in Financial Management, Computer Engineering graduate from Boston University, with strong foundation in programming and problem-solving. Visit: **dautaln.com**

SKILLS

Programming & Cloud: Python, SQL, C/C++, Java, JavaScript, AWS, Azure, Databricks, Docker
Development & Tools: Git, CI/CD, REST APIs, Advanced Excel, Power BI, GenAI, SAP, 1C

WORK EXPERIENCE

KPMG

Corporate Tax Consultant | *Advanced Excel, Power BI, SAP, 1C, Tax Compliance, GenAI*

Almaty, Kazakhstan

Sep 2024 - Aug 2025

- Analyzed large volumes of corporate accounting records, tax registers, and filings for 10+ multinational clients using SAP, 1C, and Excel, identifying compliance risks and improving reporting accuracy across multiple engagements.
- Prepared memorandums, reports, and corrective recommendations; consulted clients with declaration preparation and advised on bookkeeping practices and allowable deductions, increasing project efficiency.
- Addressed cross-border projects through targeted tax research and contributed to automation (including GenAI) initiatives to improve reporting workflows and data analysis by 20%.

PROJECTS

Nev

Personal Productivity Tool | *React, TypeScript, Vite, Supabase, Vercel*

Jul 2025 - Present

- Designed and developed a minimalist planner web app inspired by Soviet/post-Soviet dnevnik, featuring weekly, monthly, and yearly views, rich task notes, search, and structured two-page planning layout using React, TypeScript, and Vite.
- Implemented Supabase authentication and cloud sync with local persistence fallback, enabling account-based access, saved planner state across sessions, and synchronized task/project data through custom frontend state and storage layer.
- Built the product through rapid AI-assisted prototyping and iteration, using ChatGPT/Codex to accelerate UI refinement, feature implementation, debugging, and deployment workflows via Vercel.

Halo

Smart Safety Device | *Arduino, Embedded C/C++, BLE, iOS/Swift, Hardware Prototyping*

Sep 2022 - May 2023

- Designed and led development of a portable smart device, Halo, to prevent drink spiking, achieving 95% detection accuracy using accelerometer and strain gauge sensors with smartphone alerts via Bluetooth.
- Implemented calibrated Arduino code, integrated BLE communication, contributed to iOS app development, and carried out hardware testing and prototype construction through soldering and sensor calibration.
- Led a team of five for half academic year, coordinating tasks in Trello and documenting progress in biweekly logs. Prepared technical reports (e.g. IEEE), presented to faculty and project advisor, and maintained organized GitHub repositories.

EDUCATION

Boston University

Master of Science in Financial Management
Bachelor of Science in Computer Engineering

Boston, Massachusetts
May 2026 - May 2028 (Expected)
Sep 2019 - May 2023

HONORS & AWARDS

KPMG Bravo Award: Recognized by KPMG Kazakhstan through the Bravo Award program in category of complex and unusual client tasks, for exceeding expectations and contributing to success of the Corporate Tax practice.

BU ECE Award: Honored by faculty and alumni of Boston University's Electrical & Computer Engineering department for exhibiting exceptional design with Halo project, ranking among top three best Senior Design projects of 2022-2023.

LEADERSHIP & COMMUNITY SERVICE

President, BU Russian Speaking Society: Grew membership 70 → 500+; led executive board, launched nationwide partnership network (RUSA), and organized large-scale community and fundraising initiatives.
